

Pressure Equipment Safety Legislation Seminar

Description

The Pressure Equipment Safety Legislation (PESL) seminar is intended to provide an overview of the Alberta legislation governing pressure equipment safety. The seminar will be of benefit to all industry personnel directly involved in the life-cycle of pressure equipment in Alberta with respect to enhancing their awareness, knowledge and understanding of Alberta legislation and the related codes and standards.

- Engineering
- Fabrication
- Installation
- In-service integrity management (operation, maintenance and reliability)
- Repair and alteration

The target audience for this seminar includes design engineers, project engineers, project managers, purchasing personnel, manufacturing managers, quality management system personnel, plant engineers, plant and equipment maintenance personnel, reliability engineers, in-service inspectors and third-party inspection company personnel.

Objectives

The candidates can expect to acquire basic information about:

- The role of ABSA, Safety Codes Council, Boilers and Pressure Vessels Sub Council and Government in pressure equipment safety
- Safety Codes Act & Regulations
- Design Registration
- Codes & Standards – CSA, ASME and others
- Welding
- New Construction
- Quality Management Systems
- Requirements for In-Service Pressure Equipment
- Owner-User Pressure Equipment Integrity Management Systems
- Repairs and Alterations
- Accident Investigation

At the end of the course, the candidate will have a greater awareness, knowledge and understanding of Alberta legislation and programs governing pressure equipment safety and the expectations of ABSA, the pressure equipment safety authority.

Completion of this course will prepare the candidate to attend ABSA courses that go into more detail and focus on specific activities related to specific types of pressure equipment.

Facilities

Seminar Cost

\$714.00 per person (plus GST)
