Piping Submission Form AB-96 Updated

In accordance with the Pressure Equipment Safety Regulation Section 16(1)(h), Form AB-96 "General Engineering Requirements for Design and Construction of Pressure Piping Systems" has to be completed as part of a pressure piping system design submission. This form is to be completed by the engineering designer or contractor that relates to the general engineering requirements for design and construction of the pressure piping system.

The AB-96 form has been in use for sometime. With input from industry and to promote a more efficient design registration process, the form has now been updated. The most significant changes to the form include provision for the listing of the documents that are submitted, P.Eng. stamp and Permit to Practice Number. The updated AB-96 form is posted on the ABSA website under the Design Registration menu item.

To provide assistance to users allowing for easy completion of the form, "*Guide for Completing Form AB-96*" (AB-96a) is created and is also posted on ABSA website under the Design Registration menu item.

The updated AB-96 form and the new AB-96a guide have been available on the ABSA website since mid-February and we encourage submitters of pressure piping system designs for registration to use this updated form which will be made mandatory April 1, 2011.
