

### REQUEST FOR EXEMPTION

Alberta Regulation 56/2006 2(2)(d)(i)

### PRESSURE VESSEL OR PRESSURE PIPING SYSTEM NOT EXCEEDING 103 kPa

(This exemption is not applicable to boilers, thermal liquid heating systems, or power boiler blow-off vessels)

Pressure Vessel		Pressure Piping System	
Vessel (A)		Location of system (address or name of facility, etc.)	
Serial No.			
Manufacturer			
CRN		Description of system	

This pressure equipment will be operating:

with pressure relief valve(s) with set pressure not exceeding 103 kilopascals and sized so that the operating pressure cannot exceed 103 kilopascals.

(select one)

fully vented to atmosphere, with no isolating device(s) on the vent and with the vent sized and maintained so that the pressure equipment does not exceed atmospheric pressure.

We will maintain the overpressure protection in a safe operating condition and will keep a record of regular checks and servicing of the overpressure protection devices.

We will request approval from ABSA prior to operating this pressure equipment above 103 kilopascals.

We request that the above vessel be exempt from the Pressure Equipment Safety Regulation and removed from annual fees.

**NOTE:** If any repair or alteration is made without the approval of the ABSA, pressure equipment can no longer be used in "pressure service". Such a vessel shall have an additional nameplate attached indicating "Non Code" and MAWP 103 kPa.

The owner of the pressure equipment is responsible for ensuring that the above pressure equipment is accepted by ABSA prior to being returned to pressure service in the Province of Alberta and to notify new owners of these restrictions if the equipment is sold.
